

## Project Idea and Scope Definition

We have to make an application for those who want to make a plan for their life and who want to do regular daily activities and we created an application to provide this opportunity to those who want to be regular and live with a plan. In this application users can be able to add and update his/her own activities like checked-off/not checked-off, if write an incorrect choice delete the incorrect rows and choices, can be able to access his/her streaks (streaks are if who regularly made activities the is no missing he/she make streak) with 2 options: First of can track his/her streak for every habit is the checked-off and second option is can track his/her streak for specific habit. This application will be generally used for everyone because everyone needs to contrivable life, contrivable life provides to access everything in your life. This application is beneficial for everyone, everyone can use this application and this application appeal to everyone. Application is written with Python, sqlite3, and PySide6 for GUI (Graphical User Interface) and GUI is very user-friendly and easy to use. If you want to see your record in week x and date DD.MM.YYYY you'll write the week which you want to see and you'll write the date which you want to see and then you'll see the record this is very easy you'll write week and date and click the 'Show Record' button then you'll see the results, if you want to add or update, write week and date if you want to update you will see your habits like checked-off or not checked-off you can able to update these records with 'Add/Update Record' then you'll successfully update your record. If you want to add record write week and date write checked-off or not checked-off and click the 'Add/Update Record' then you'll successfully add a record. If you want the show the streak of your specific or every habit you'll just 'Show Streak' or 'Show Best Habit Streak' button. If you want to delete a record just type week and date and click the delete record you'll delete that record. This application is made for everyone as well as made with a user-friendly interface for everyone to use easily.
